

LUBRICATING EYE DROPS

1. Do not use if tamper-evident seal is broken. Remove tamper-evident seal before use.
2. Remove the cap from the bottle. Do not shake prior to using. If bottle has been shaken: with the bottle up right, squeeze it until a light mist is released.
3. Lean your head all the way back and pull your lower eyelid down.
4. Tip the bottle at a downward angle or upside down. Use a gentle, sustained squeeze to the MIDDLE of the bottle between your thumb and index finger to release 1-2 drops into each eye. Alternatively, bend your index finger and hold the bottle between your 2nd. knuckle and your thumb and apply a gentle sustained squeeze to release 1 – 2 drops into each eye.

There is a sweet spot between squeezing too much and not squeezing enough. To keep sterility of the solution, it takes a moment BEFORE the patented one-way valve system allows the drop to be dispensed. If a steady stream comes out of the bottle you have squeezed too hard.

To avoid contamination, do not touch the dropper tip.

5. Replace the cap onto the bottle to close it. Store laying on its side.
